**Largest Ever Single Dealer Rubber Safety Surfacing Project**  
*Rubaroc® Congratulates Missouri Company on large project in Lake of the Ozarks*

**Fenton, MO** — C and M Concrete St. Louis, based in Fenton, Mo., is proud to have completed the largest single dealer rubber safety surfacing project using Rubaroc®, a poured-in-place polymer resin and granular rubber material.

The project, a 9,800 square-foot makeover at a home in Lake of the Ozarks includes 1,700 vertical feet of steps, multi-level patio decking, three terraces, and pool coping.

“It’s been an amazing project from start to finish,” says Matt Sadl, owner of C and M Concrete St. Louis. “We have had the full support of Rubaroc as we bid and then completed this job and the transformation has been wonderful.”

Rubaroc is installed much like concrete, by hand trowelling. C and M Concrete is the sole distributor and the only certified contractor for Rubaroc in Missouri. It offers the product as part of its rubber safety surfacing division.

“We are extremely pleased with how Rubaroc performed during the installation of this high profile project in Lake of the Ozarks,” says Brian Field, President of

Rubaroc (Coppell, TX). “The entire crew from C and M Concrete in St. Louis and Authorized Rubaroc Dealer Matt Sadl worked efficiently to ensure a beautiful consistency of our proprietary, trowelled in place, no-slip rubber surfacing product. Their expertise in installation of steps, walkways and the pool area was highly evident. The homeowners of this extraordinary lakefront property are ecstatic with the outcome.”

C and M Concrete St. Louis is a specialist in traditional and architectural/stamped concrete surfaces. It expanded to include the rubber safety surfacing division last year.

“Rubaroc is fluid,” says Sadl. “That means it can be manipulated into a myriad of design possibilities that not only result in beautiful works of art but also a flooring surface that is crafted to reduce the risk of slips and falls.”

Another C and M Concrete project embedded the logo of the St. Louis Rams into the flooring at the St. Louis Rams Training Academy in Chesterfield, Mo. Because Rubaroc comes in a wide variety of colors, contractors typically can match any logo or design requested.

The rubber surfacing material can be used indoors or out. It is especially good for use around swimming pool decks and playgrounds because the material also minimizes heat retention in outdoor settings. It can be hand-trowelled over the top of existing concrete, as is being done in Lake of the Ozarks, or on top of tile or wood surfaces. Because the final surface provides high traction, and is slip-resistant and comfortable, these types of rubber safety coatings can be used in both residential and commercial settings.

Common uses for rubber safety surfaces include:

- Pool decks
- Spas
- Steps
- Porches
- Walkways
- Driveways
- Garage or Basement interiors
- Patios
- Retail floors
- Playgrounds and Water Parks
- Childcare facilities
- Country Clubs
- Hotels
